

LOW-COST VISION REDEFINED

- Flaw detection
- OCR/OCV
- Gauging
- Object location
- Part identification
- Assembly verification
- Color sorting and monitoring

NEW DVT vision sensors come fully loaded at an entry-level price

DVT products created the market for low-cost, easy-to-use machine vision. Now, Cognex raises the bar with the new DVT 515 and 535 vision sensors. Combined with Intellect 1.4 (with a new tool for finding part defects) — DVT's most powerful and easy-to-use software — all the advantages of a full-featured vision system are available to you at rock-bottom prices. These new vision sensors are part of a full DVT family that includes line scan models and two new models for color applications. And they're all supported by Cognex, the world leader in machine vision. For the simplest vision application to the most complex, Cognex has the right product.

If you have a vision project, call us at 1-800-677-2646 or visit www.cognex.com/dvt and register for free software and training.
